Subject: Residential Sampling in Telluride
ERI Logan Lead Study Title Page.pdf

.....
>>>>

Steve,

I wanted to follow-up on our conversation yesterday about lead sampling in Telluride. I talked with Camille after I got off the phone with you, and here is a summary of our conversation.

Camille said that to the best of her knowledge, there was never a smelter in Telluride. There was however, comprehensive soil sampling throughout town, including backyards. A report for this investigation was completed, but I don't know when. I have attached the title page and am trying to locate the document.

Unfortunately we do not have much information in Ouray. Most of the work done for the Idarado Site has been further up the Canyon towards Red Mountain Pass. The only other work I am aware of in the area is a number of site assessments for mining sites located along tributaries to the Uncompahgre .

On a related note, Camille did say that she thought she collected a few residential soil samples in Silverton as part of the PA/SI work she did in the 1990s.

I hope I answered all your questions. Let me know if I missed something.
